

## PRESS RELEASE

### 3 IN 1'S FOR IMMEDIATE RELEASE

Velvac is pleased to announce that it has begun manufacturing its high quality 3in1s in its own North American assembly plant. 3in1 assemblies are a key component of heavy trucks which allow electrical and air brake connections between the trailer and the tractor. 3in1s are external to the vehicle and exposed to a harsh environment. As such, they are one of the most commonly replaced component in the HD truck industry.

A review of competitor products showed Velvac's 3in1s to be some of the most durable and reliable in the industry, presenting an opportunity for consumers for long-term savings by substantially reducing the frequency of replacements and failures. Velvac is a brand known for quality, and Velvac 3in1s have been developed by a team with over 100 years of combined HD truck industry experience.

Velvac is an IATF 16949 and ISO 140001 certified multinational company and a known truck industry leader in mirror and brake system manufacturing with a large footprint in the truck Aftermarket.
